

RRI057

Accession Number: BR-3670599-MR
Requested Date: September 19, 2017 09:45
Report Status: Final
Requested Procedure: 3700454
Procedure Description: MRI PELVIS
Modality: MR

Referring Physician: OEHLER, MARTIN
Organization: MTG and Districts Health

Findings

Radiologist: VOYVODIC, FRANK

MRI PELVIS**Summary :**

Large subserosal posterior uterine body and cervix.

No change in size or morphology since MRI 09/06/2017 - see previous report for details.

Clinical:

Large uterine fibroid for preoperative assessment.

Technique:

1.5T multiplanar MR imaging.

Comparison Study:

MRI pelvis 09/06/2017.

Findings:**Uterus:**

Anteverted, minimally retroflexed.

Uterus displaced anterosuperiorly by large posterior subserosal fibroid involving the posterior uterine body lower segment and cervix. No change in lesion size or morphology since previous MRI 09/06/2017. Maximum diameter over 11cm. Central heterogeneous degeneration. No worrisome or high risk features for uterine sarcoma. The anterior margin of the fibroid extends within several millimetres of the endometrial cavity.

Cervix and Vagina:

Nil additional.

Ovaries:

Displaced superiorly as previously documented.

Other Findings:

No lymphadenopathy.
