Referring Physician: BEDSON, LISA
Organization: North Adelaide

Accession Number: BR-3131784-MR
Requested Date: July 27, 2016 09:46
Report Status: Final
Requested Procedure: 3084235
Procedure Description: MRI PELVIS
Modality: MR

Findings

Radiologist: CHONG, WOON KIT

MRI PELVIS

Summary:

Unremarkable pelvic MRI. No mullerian duct abnormality, adenomyosis, endometriomas, hydrosalpinx or adhesions.

Clinical:

Recurrent IVF. Adenomyosis? Hydrosalpinx? Fibroids? Other?

Technique:

Multi-parametric pelvic MRI fertility protocol including Volumetric 3D Coronal T2 plus reconstructions, T1 axial pre/post fat saturation.

Findings:

Uterus:

Size & morphology: 97cc (4.2 x 5.5 x 8cm). Anteverted and anteflexed. No mullerian duct abnormality.

Endometrial thickness: 12mm. No focal lesions.

Junctional zone: Anterior maximal junctional zone thickness 4mm. Posterior maximal junctional zone thickness 4mm. Fundal maximal junctional zone thickness 5mm. No MRI features of adenomyosis.

Uterine lesions: Nil.

Cervix & Vagina:

Normal morphology.

Left Ovary:

Position: Lateral adnexa.

Size: 8.4cc (2.5 x 2 x 3.2cm).

Follicle(s): 8. Subcentimetre.

Lesions and/or endometrioma: Nil.

Right Ovary:

Position: Lateral adnexa.

Size: 10.2cc (2.9 x 2.5 x 2.7cm).

Follicle(s): A single collapsing follicle. Approximately 8 other subcentimetre follicles.

Lesions and/or endometrioma: Nil.

Adnexa:

No hydrosalpinx.

Other Findings:

Small amount of fluid in the pelvis within physiological limits. No evidence of any adhesions. Lumbosacral spine appears unremarkable.
