SUBJECT ID = RR

ENDOMETRIOSIS PELVIC MRI ASSESSMENT – BR PROFORMA REPORT BLIND REVIEW

Absent

Present

Uterine anatomy

Conventional

- Arcuate
- 3. Septate
 - Full septum
 - Subseptate
- Bicornuate unicollis
- Bicornuate bicollis
- Didelphys
- Other (free text enabled).

Uterine Lie (can be more than one selection)

Anteverted

- Anteflexed
- Retroverted
- Retroflexed
- Axial

Others (please specify) (Free text enabled)

Uterine Size (body + cervix - 3 planes in mm)

Endometrial thickness (sag plane in mm to nearest mm)

1. (Free text)

Endometrial lesions

- Not identified.
- Present. Polyp.

2b-1: No. of polyps (free text)

Size of each polyp. (free text) 2b-2:

Adenomybsis

- No MRI supportive features
- Supportive MRI features as described:
 - Submucosal cysts.
 - 2. Abnormal junctional zone thickening and measurement
 - Anterior (mm)
 - Fundal (mm)
 - iii. Posterior (mm)

resence of an adenomyoma

Yes

Fibroids

No

No

Yes

2a: Number of fibroids:

2b: Largest fibroids (location and size mm all

fibroids >10mm and/or impact on the cavity) - (Free text)

2b:

Submucosal fibroids

2b-0:

REVIEWER INITIA

2b-1-1: (description: free text)

Left ovary

Absent (Branching logic - move to "Right ovary")

Present

2. Volume (above x 0.52). 9 - 15

Left ovary follicle measurements and count

- 1. N follicles between 2 and 9 mm in diameter
 - a. (Free text)
- 2. N follicles > 9 mm
 - a. (Free text)
- Dominant follicle

Left ovary position

Lateral adnexa, Unremarkable,

High positioning in iliac fossa. 2:

3: Tethered/ distorted appearances - (may be

multiple options)

3a: Intimate relationship to the lateral uterus

3b Intimate relationship/ tethering to adjacent

bowel.

3c. Tethering to pelvic sidewall

3d:Tethering to the uterosacral ligament

SUBJECT ID = RR

3b:

Absent

4 Fat component (T1/T2 hyperintense. Low signal on fat suppression).

4a: Present.

4b: Absent.

Adnexa

1: Hydrosalpinx

a∕a: No

1b: Yes

2: Hematosalpinx

2b: Yes

3: Other (free text).

Are both ovaries immediately approximated "kissing"?

l:/ No

2: Yes

Urinary bladder nodule

Definition: Is there presence of a nodule in the bladder.

/ Absent

2:

Present

2a: Size: NN in millimetres (mm)

Uterovesical region

Definition: Assessment of whether there is a visible preserved fat plane +/- physiologic fluid +/- absent

distortion between the anterior uterine serosa and bladder.

1: / Normal.

2: Abnormal.

2a: (free text if required)

Ureteric nodule(s)?

Absent

Present

2a: Location (free text + distance to ureteric

orifice/VUJ)

2b: Size (mm)

Pouch of Douglas obliteration

Definition: Assessment for abnormal loss of fat plane +/physiologic fluid and immediate approximation of
rectosigmoid and/or small bowel to the posterior uterine
serosa, cervix +/- vaginal wall.

Discrete linear bands may be visible ($\sqrt{T1}$, $\sqrt{T2}$)

Negative

Partial

2a: Left
2b: Right

3: Complete

3a: Positive = obliteration.

3b: Positive = band adhesions.

Nodules present on the posterior vaginal fornix?

Definition: Thickening of superior 1/3 of posterior vaginal wall +/- nodularity. Nodules: \downarrow T2 \uparrow T1 (if active

haemorrhagic deposits)

:/ No

2: Yes

REVIEWER INITIALS

2a: Dimension of nodule to be measured in

millimetres (mm).

2b1: Inactive.

2b2: Active

Vaginal forniceal elevation?

Definition: Upper level of fornix on sagittal view is superior to the angle of the uterine isthmus with stretching of

aginal wall, and/or acute angulation of the fornix.

/ No

: Yes

2a: Left.

2b: Right

2c: Left and Right.

Rectovaginal nodules present?

Definition: Presence of deep infiltrating endometriosis in the anterior rectal wall and posterior vaginal fornix, located below the peritoneum of the Pouch of Douglas. Inactive/fibrotic disease characterised as ↓ T1 ↓ T2 signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal

(he norrhagic/ proteinaceous content + glandular deposits).

No

2: Yes

2a: Size (mm)

2b1: Inactive.

2b2: Active

SUBJECT ID = RR

Uterosacral ligament nodules or thickening?

Definition: Inactive/ fibrotic disease nodules characterised as $\sqrt{11} \sqrt{12}$ signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal (hemorrhagic/ proteinaceous content + glandular deposits).

Nο

Yes nodules

2a:

Left

2b:,

2a-1:

Right 2b-1:

Size (mm)

2¢1:

Inactive.

2c2:

Active

Yes thickening.

3a:

Left. Right

Both.

Retrocervical nodule present?

Definition: Inactive/ fibrotic disease characterised as \downarrow T1 ↓ T2 signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal

(hemorrhagic/ proteinacous content + glandular deposits).

No

2a: Size (mm)

2b1:

Yes

Inactive.

2b2:

Active

Rectum and colon:

Is there bowel deep infiltrating endometriosis seen?

Definition: Inactive/fibrotic disease characterised as \downarrow T1 ↓ T2 signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal (hemorrhagic/ proteinacous content + glandular deposits). "Mushroom cap sign" is specific to severe invasive bowel endometriosis and is characterized as a plaque with \downarrow T2 at its 'base' and 个 T2 at its 'cap'.

No

Yes

2a: Distance from the anal verge

> Length (mm) 2a-1:

2b: Lesion type

> 2b-1: Isolated lesion

2b-2: Multiple lesions

Curved lesion 2b-3:

Straight lesion 2b-4:

2c: Maximal depth layer of invasion each

leasion (muscularis, submucosa,

mucosa).

Lesion 1: (free text) 2c-1:

(2c-2: Lesion 2 (free text) - delete if

not relevant

(2c-3 etc.)

Is it stuck to any structures or free lying? 2c:

> 2d-1: Vagina

> 2d-2: Uterus

2d-3: Uterosacral ligaments

REVIEWER INITIALS

2d-4: Ovary

2d: Plaque thickness

2a: 1-5mm.

2b: 6-10mm.

2c: >11mm.

Activity 2e:

> 2f1: Inactive.

2f2: Active.

2f: "Mushroom cap" appearance:

> 2g1: Present.

2g2: Absent.

Is there evidence of tethering of the bowel?

1: No

Yes, tethered to

2a: Uterus

L. ovary

2c: R. ovary

2d: L. uterosacral ligament nodule

2e: R. uterosacral ligament nodule

2f: L pelvic side wall.

2g: R pelvic side wall.

2h: Other.

Any other salient findings on the study:

'Νο Yes

(Free text).
