BR PROFORMA REPORT BLIND REVIEW

#### Uterus

2-

Absent

Present

## Utegine anatomy

Conventional

- Arcuate
- 3. Septate
  - a. Full septum
  - Subseptate
- 4. Bicornuate unicollis
- Bicornuate bicollis
- Didelphys
- 7. Other (free text enabled)

# Uterine Lie (can be more than one selection)

Anteverted

- Anteflexed
- 3. Retroverted
  Retroflexed
  - Axial
  - Others (please specify) (Free text enabled)

#### Uterine Size (body + cervix - 3 planes in mm)

1 (Free text) 73 X48 X43 m

## Endometrial thickness (sag plane in mm to nearest mm)

1. (Free text)

# Endernetrial lesions

- 1. Not identified
- Present. Polyp.
  - 2b-1: No. of polyps (free text)
  - 2b-2: Size of each polyp. (free text)

# Adenomyesis

- 1 No MRI supportive features
- Supportive MRI features as described:
  - Submucosal cysts.
  - Abnormal junctional zone thickening and measurement
    - Anterior (mm)
    - ii. Fundal (mm)
    - ii. Posterior (mm)

## Presence of an adenomyoma

- 1: / No
- Yes

# Fibroids

No

Yes

- 2a: Number of fibroids:
- Largest fibroids (location and size mm all

fibroids >10mm and/or impact on the cavity) – (Free text)

- 2b Submucosal fibroids
  - 2b-0 No

REVIEWER INITIALS

2b-1

Yes

2b-1-1 (description; free text)

## Left ovary

Absent (Branching logic - move to "Right ovary")

Present

#### Left ovary size (3 planes and volume)

- 1. NN x NN x NN mm
- Volume (above x 0.52).

#### Left ovary follicle measurements and count

- N foilicles between 2 and 9 mm in diameter
  - (Free text)
- N follicles > 9 mm
  - a. (Free text)
- Dominant follicle

#### Left ovary position

Lateral adnexa: Unremarkable.

 $\left(\frac{2}{3}\right)$ 

High positioning in iliac fossa

Tethered/ distorted appearances – (may be multiple options)

3a. Intimate relationship to the lateral uterus

3b Intimate relationship/ tethering to adjacent

3c Tethering to pelvic sidewall

3d Tethering to the uterosacral ligament

SUBJE	ECT ID =	: RR	432	
		Other:	free text)	
DETT DV	arian end	ometriom	а	
1: /	No

2c:

2d.

2e

SUBJECT ID = RR

432

- 3b:
- 4 Fat component (T1/ T2 hyperintense. Low signal on fat suppression)

Absent

- 4a: Present
- 4b: Absent

#### Adnexa

- Hydrosalpinx
  - 1a: No
  - 1b: Yes
- Hematosalpinx
  - 2a: No
  - 2b Yes
- Other (free text).

#### Are both ovaries immediately approximated "kissing"?

- No
- 2 Yes

#### Urinary bladder nodule

Definition is there presence of a nodule in the bladder.

- 1 Absent
- 2 Present
  - 2a Size NN in millimetres (mm)

#### Uterovesical region

Definition: Assessment of whether there is a visible preserved fat plane +/- physiologic fluid +/- absent distortion between the anterior uterine serosa and bladder

Normal.

- Abnormal.
  - 2a: (free text if required)

Ureteric nodule(s)?

1: Absent

- 2a: Location (free text + distance to ureteric orifice/ VUJ)
- 2b: Size (mm)

## Pouch of Douglas obliteration

Present

Definition: Assessment for abnormal loss of fat plane +/physiologic fluid and immediate approximation of
rectosigmoid and/or small bowel to the posterior uterine
serosa, cervix +/- vaginal wall.

Discrete linear bands may be visible (\$\psi\$ T1, \$\psi\$ T2)

- Negative
- 2 Partial
  - 2a Left
- 2b. Right
  Complete
  - 3a: Positive = obliteration.
    - 3b: Positive = band adhesions

## Nodules present on the posterior vaginal fornix?

Definition Thickening of superior 1/3 of posterior vaginal wall +/- nodularity. Nodules: \$\delta\$ T2 \tau11 (if active haemorrhagic deposits)

- No
- Yes

# REVIEWER INITIALS

- 2a: Dimension of nodule to be measured in millimetres (mm)
  - 2b1. Inactive
  - 2b2: Active

# Vaginal forniceal elevation?

Definition Upper level of fornix on sagittal view is superior to the angle of the uterine isthmus with stretching of vaginal wall, and/or acute angulation of the fornix

- No
- Yes
- Za Left
- 2b: Right

# Rectovaginal nodules present?

Definition Presence of deep infiltrating endometriosis in the anterior rectal wall and posterior vaginal fornix, located below the peritoneum of the Pouch of Douglas Inactive/ fibrotic disease characterised as  $\downarrow$  T1  $\downarrow$  T2 signal.

Active disease as 111, 1 to intermediate T2 signal (hemorrhagic/ proteinaceous content + glandular deposits)

- No
- Yes
  - 2a Size (mm)
  - 2b1 Inactive
  - 2b2 Active

# SUBJECT ID = RR 45

## Uterosacral ligament nodules or thickening?

Definition: Inactive/ fibrotic disease nodules characterised as  $\downarrow$  T1  $\downarrow$  T2 signal.

Active disease as  $\uparrow T1$ ,  $\uparrow$  to intermediate- T2 signal (hemorrhagic/ proteinaceous content + glandular deposits).

- 1: No
- 2: Yes nodules
  - 2a. Left
    - 2a-1: Size (mm)
  - 2b. Right
    - 2b-1: Size (mm)
  - 2c1: Inactive
  - 2c2: Active
- Yes thickening.
  - 3a Left.
  - 3b Right

    3c Both.

#### Retrocervical nodule present?

Definition: Inactive/ fibrotic disease characterised as  $\downarrow$  T1

↓ T2 signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal

memorrhagic/ proteinacous content + glandular deposits).

1 No

2a: Size (mm)

Yes

2b1 Inactive

2b2 Active

#### Rectum and colon

#### Is there bowel deep infiltrating endometriosis seen?

Definition: Inactive/ fibrotic disease characterised as  $\downarrow$  T1  $\downarrow$  T2 signal.

Active disease as  $\uparrow T1$ ,  $\uparrow to intermediate-T2 signal$  (hemorrhagic/ proteinacous content + glandular deposits). "Mushroom cap sign" is specific to severe invasive bowel endometriosis and is characterized as a plaque with  $\downarrow T2$  at its 'base' and  $\uparrow T2$  at its 'cap'.

- 1: No 2: Yes
  - 2a: Distance from the anal verge
    - 2a-1: Length (mm)
  - 2b: Lesion type
    - 2b-1: Isolated lesion
    - 2b-2: Multiple lesions
    - 2b-3: Curved lesion
    - 2b-4: Straight lesion
  - 2c: Maximal depth layer of invasion each leasion (muscularis, submucosa, mucosa).
    - 2c-1: Lesion 1: (free text)
    - (2c-2: Lesion 2 (free text) delete if not relevant
    - (2c-3 etc.)
  - 2c: Is it stuck to any structures or free lying?
    - 2d-1: Vagina
    - 2d-2: Uterus
    - 2d-3: Uterosacral ligaments

REVIEWER INITIALS

2d-4: Ovary

2d: Plaque thickness

2a: 1-5mm.

2b: 6-10mm.

2c >11mm.

2e: Activity

2f1: Inactive.

2f2: Active.

2f: "Mushroom cap" appearance:

2g1: Present.

2g2: Absent.

15 there evidence of tethering of the bowel?

. No

Yes, tethered to

2a: Uterus

2b L ovary

2c: R. ovary

L. uterosacral ligament nodule

R. uterosacral ligament nodule

2f: L pelvic side wall

2g: R pelvic side wall.

2h: Other.

Any other salient findings on the study:

No -

Yes inchous
