Is there bowel deep infiltrating endometriosis seen?

Definition: Inactive/ fibrotic disease characterised as \downarrow T1 \downarrow T2 signal.

Active disease as $\uparrow T1$, $\uparrow to$ intermediate- T2 signal (hemorrhagic/ proteinacous content + glandular deposits). "Mushroom cap sign" is specific to severe invasive bowel endometriosis and is characterized as a plaque with $\downarrow T2$ at its 'base' and $\uparrow T2$ at its 'cap'.
