# 88

#### **ENDOMETRIOSIS PELVIC MRI ASSESSMENT –**

#### **BR PROFORMA REPORT BLIND REVIEW**

#### Uterus

1:

Absent

2:

Present

#### **Uterine anatomy**

Conventional

- Arcuate
- 3. Septate
  - a. Full septum
  - b. Subseptate
- Bicornuate unicollis
- Bicornuate bicollis
- Didelphys
- 7. Other (free text enabled).

#### Uterine Lie (can be more than one selection)

- Anteverted
- Anteflexed
- Retroverted
- Retroflexed
- Axial
- Others (please specify) (Free text enabled)

#### Uterine Size (body + cervix - 3 planes in mm)

(Free text).

86 x 43 x 32mm

#### Endometrial thickness (sag plane in mm to nearest mm)

(Free text)

7 mm

#### **Endometrial lesions**

Not identified.

2. Present. Polyp.

2b-1:

No. of polyps (free text)

Size of each polyp. (free text) 2b-2:

#### Adenomyosis

No MRI supportive features

2. Supportive MRI features as described:

1. Submucosal cysts.

Abnormal junctional zone thickening and measurement

Anterior (mm)

Fundal (mm)

Posterior (mm)

#### Presence of an adenomyoma

1: No

2: Yes

#### **Fibroids**

1:

No

2:

Yes

2a:

Number of fibroids:

2b: Largest fibroids (location and size mm all

fibroids >10mm and/or impact on the cavity) - (Free text)

2b: Submucosal fibroids 2b-0:

(No

subsevosal

FV

2b-1: Yes

2b-1-1: (description: free text)

#### Left ovary

1: Absent (Branching logic - move to "Right ovary")

2: Present

**REVIEWER INITIALS** 

#### Left ovary size (3 planes and volume)

1. NNXNNXNNmm 37 + 26 + 33 mm

16- E CC 2. Volume (above x 0.52).

#### Left ovary follicle measurements and count

1. N follicles between 2 and 9 mm in diameter

a. (Free text)

2. N follicles > 9 mm

a. (Free text)

3. Dominant follicle

a.

b. N.

# Left ovary position

1: Lateral adnexa. Unremarkable.

2: High positioning in iliac fossa.

3: Tethered/ distorted appearances - (may be multiple options)

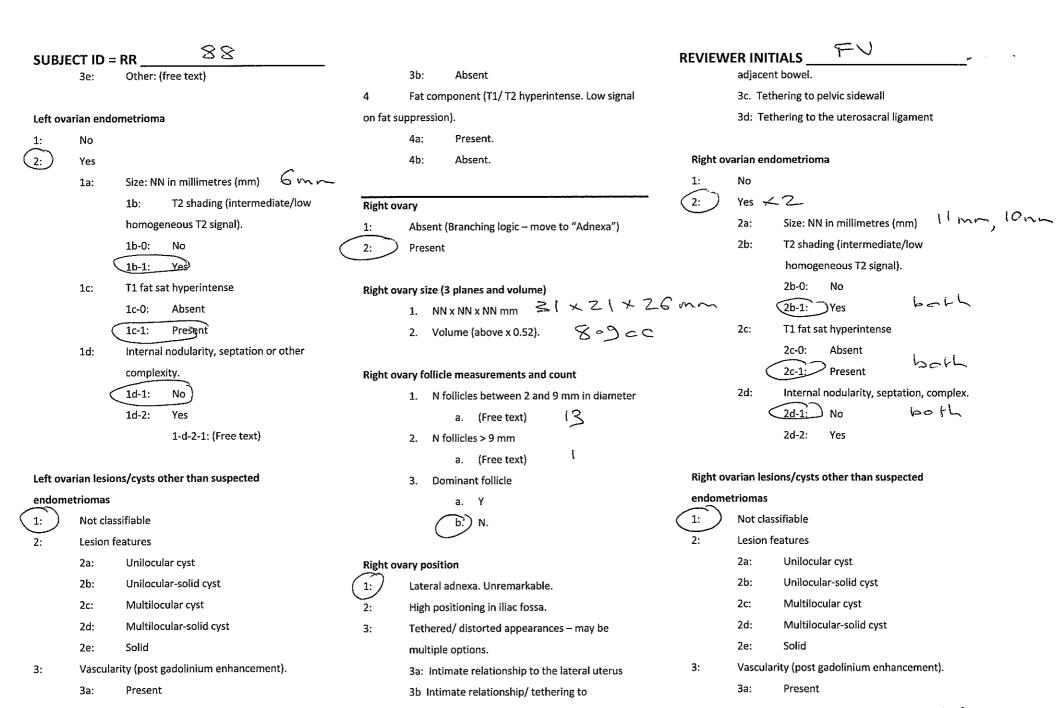

3a: Intimate relationship to the lateral uterus

3b Intimate relationship/ tethering to adjacent bowel.

3c. Tethering to pelvic sidewall

3d:Tethering to the uterosacral ligament

Page 1 of 4

"SUBJECT ID = RR

3b:

4 Fat component (T1/ T2 hyperintense. Low signal on fat suppression).

Absent

4a: Present.

4b: Absent.

#### Adnexa

1: Hydrosalpinx

1a: No

1b: Yes

2: Hematosalpinx

2a: No

2b: Yes

3: Other (free text).

Are both ovaries immediately approximated "kissing"?

No

2: Yes

#### Urinary bladder nodule

Definition: Is there presence of a nodule in the bladder.

الن<u>ا</u> Abs

Absent

2: Present

2a: Size: NN in millimetres (mm)

#### Uterovesical region

Definition: Assessment of whether there is a visible preserved fat plane +/- physiologic fluid +/- absent distortion between the anterior uterine serosa and bladder.

Normal.

2: Abnormal.

2a: (free text if required)

#### Ureteric nodule(s)?

Absent

2: Present

2a: Location (free text + distance to ureteric orifice/ VUJ)

2b: Size (mm)

#### Pouch of Douglas obliteration

Definition: Assessment for abnormal loss of fat plane +/physiologic fluid and immediate approximation of
rectosigmoid and/or small bowel to the posterior uterine
serosa, cervix +/- vaginal wall.

Discrete linear bands may be visible ( $\downarrow$  T1,  $\downarrow$  T2)

1: Negative

2: Partial

2a: 2b: Left

Right

3: Complete

3a: Positive = obliteration.

3b: Positive = band adhesions.

#### Nodules present on the posterior vaginal fornix?

Definition: Thickening of superior 1/3 of posterior vaginal wall +/- nodularity. Nodules: ↓ T2 ↑T1 (if active 

→haemorrhagic deposits)

/ No

2: Yes

### REVIEWER INITIALS

2a: Dimension of nodule to be measured in millimetres (mm).

2b1: Inactive.

2b2: Active

#### Vaginal forniceal elevation?

Definition: Upper level of fornix on sagittal view is superior to the angle of the uterine isthmus with stretching of <a href="mailto:vaginal">vaginal</a> wall, and/or acute angulation of the fornix.

1:

No

2: Yes

2a: Left.

2b: Right

2c: Left and Right.

## Rectovaginal nodules present?

Definition: Presence of deep infiltrating endometriosis in the anterior rectal wall and posterior vaginal fornix, located below the peritoneum of the Pouch of Douglas. Inactive/ fibrotic disease characterised as  $\downarrow$  T1  $\downarrow$  T2 signal.

Active disease as ↑T1, ↑ to intermediate- T2 signal (hemorrhagic/ proteinaceous content + glandular deposits).

1:

*)* No Yes

2a: Size (mm)

2b1: Inactive.

2b2: Active

2b2:

Active

# ↓ T2 signal. 2: Yes 2a: Size (mm) 2b1: Inactive.

# Rectum and colon: Is there bowel deep infiltrating endometriosis seen? Definition: Inactive/fibrotic disease characterised as $\sqrt{11}$ Active disease as ↑T1, ↑ to intermediate- T2 signal (hemorrhagic/proteinacous content + glandular deposits). "Mushroom cap sign" is specific to severe invasive bowel endometriosis and is characterized as a plaque with $\downarrow$ T2 at its 'base' and 个 T2 at its 'cap'. No Yes 2a: Distance from the anal verge 2a-1: Length (mm) 2b: Lesion type Isolated lesion 2b-1: Multiple lesions 2b-2: 2b-3: Curved lesion 2b-4: Straight lesion Maximal depth layer of invasion each 2c: leasion (muscularis, submucosa, mucosa). 2c-1: Lesion 1: (free text) (2c-2:Lesion 2 (free text) - delete if not relevant (2c-3 etc.) 2c: Is it stuck to any structures or free lying? 2d-1: Vagina 2d-2; Uterus 2d-3; Uterosacral ligaments
