BR PROFORMA REPORT BLIND REVIEW

Uterus

Absent

Present

Uterine ariatomy

Conventional

Arcuate

Septate

Full septum

Subseptate

Bicomuate unicollis

Bicornuate bicollis

Didelphys

Other (free text enabled).

Uterine Lie (can be more than one selection)

Anteverted

Anteflexed

Retroverted

Retroflexed

Axial

Others (please specify) (Free text enabled)

Uterine Size (body + cervix - 3 planes in mm)

(Free text)

Endometrial thickness (sag plane in mm to nearest mm)

Endometrial lesions

Not identified.

Present. Polyp.

No. of polyps (free text) 2b-1

Size of each polyp (free text) 2b-2:

Adebamyosis

No MRI supportive features

Supportive MRI features as described

Submucosal cysts.

Abnormal junctional zone thickening and

measurement

Anterior (mm)

Fundal (mm)

Posteriar (mm)

Presence of an adenomyoma

No

Yes

Pfbroids

No

Yes

Number of fibroids 2a

Largest fibroids (location and size mm all 2.0

fibroids >10mm and/or impact on the cavity) - (Free text)

Submucosal fibroids

No 2b-0

REVIEWER INITIALS

2b-1

Yes

2b-1-1. (description free text)

Left ovary

Absent (Branching logic - move to "Right ovary")

Present

Left ovary size (3 planes and volume)

Volume (above x 0.52)

Left ovary follicle measurements and count

N follicles between 2 and 9 mm in diameter.

2. N follicles > 9 mm

a (Free text)

3. Dominant follicle

Left ovary position

Lateral adnexa. Unremarkable

High positioring in that fossal

Tethered/ distorted appearances - (may be

prohiple options)

3a Intimate relationship to the lateral uterus

3b Intimate relationship/ tethering to adjacent

bowel.

3c. Tethering to pelvic sidewall

3d Jethering to the uterosacral ligament

Page 1 of 4

SUBJECT ID = RR 3e: Other: (free text) 3b: Absent Fat component (T1/T2 hyperintense. Low signal Left ovarian endometrioma on fat suppression). Present. No 4b: Absent. Yes Size: NN in millimetres (mm) 1a. 1b T2 shading (intermediate/low Right ovary homogeneous T2 signal). Absent (Branching logic - move to "Adnexa") No Present Yes TI fat sat hyperintense 1c. Right ovary size (3 planes and volume) Absent Present Volume (above x 0.52). ernal nodularity, septation or other Right ovary follicle measurements and count N follicles between 2 and 9 mm in diameter Yes 1-d-2-1: (Free text) N follicles > 9 mm a. (Free text) Left ovarian lesions/cysts other than suspected Dominant follicle endometriomas

Right ovary position

Lateral adnexa. Unremarkable.

High positioning in iliac fossa.

multiple options

Tethered/ distorted appearances - may be

3a: Infimate relationship to the lateral uterus

35 Intimate relationship/ tethering to

Not classifiable

REVIEWER INITIALS adjacent bowel. 3c Tethering to pelvic sidewall Tethering to the uterosacral ligament Right ovarian endometrioma Size NN in millimetres (mm) T2 shading (intermediate/low homogeneous T2 signal). Yes TI fat sat hyperintense 2c-0: Absent Present Internal nodularity, septation, complex. 2d-No 2d-2 Yes Right ovarian lesions/cysts other than suspected Not classifiable Lesion features Unilocular cyst Unilocular-solid cyst Multilocular cyst Multilocular-solid cyst Solid Vascularity (post gadelinium enhancement). Present

SUBJECT ID = RR

- Absent
- Fat component (T1/ T2 hyperintense. Low signal on fat suppression).
 - Present. 4a:
 - 4b: Absent.

Adnexa

- Hydrosalpinx

- ematosalpinx
 - No Yes
- Other (free text).

Are both ovaries immediately approximated "kissing"?

Urinary bladder nodule

- Definition. Is there presence of a nodule in the bladder.
- Absent Present
 - Size: NN in millimetres (mm) 2a.

Uterovesical region

Normal.

Definition. Assessment of whether there is a visible. preserved fat plane +/ physiologic fluid +/- absent distortion, between the anterior uterine serosa and bladder.

- Abnormal.
 - (free text if required)

Oreteric nodule(s)?

- Absent
 - Present Location (free text + distance to ureteric 2a:
 - orifice/ VUJ)
 - 2b Size (mm)

Pouch of Douglas obliteration

Definition: Assessment for abnormal loss of fat plane +/physiologic fluid and immediate approximation of rectosigmoid and/or small bowel to the posterior uterine serosa, cervix +/- vaginal wall.

Discrete linear bands may be visible (\$\sqrt{T1}, \$\sqrt{T2}\$)

- Negative
- Partial
 - Left 2a:
- Complete
 - Positive = obliteration.

Right

Positive = band adhesions

Nodules present on the posterior vaginal fornix?

Definition. Thickening of superior 1/3 of posterior vaginal +/- nodularity. Nodules 👃 T2 🕆 T1 (if active) hagmorrhagic deposits] No

Yes

- REVIEWER INITIALS
 - Dimension of nodule to be measured in
 - millimetres (mm)
 - 2b1: Inactive 2b2: Active

Vaginal forniceal elevation?

Definition: Upper level of fornix on sagittal view is superior to the angle of the uterine isthmus with stretching of vaginal wall, and/or acute angulation of the formix.

- No
- Yes
 - 2a Left.
 - 2b: Right
 - 2c: Left and Right

Rectovaginal nodules present?

Definition: Presence of deep infiltrating endometriosis in the anterior rectal wall and posterior vaginal fornix, located below the peritoneum of the Pouch of Douglas Inactive/ fibrotic disease characterised as ↓ T1 ↓ T2 signal.

Active disease as TT1, T to intermediate-T2 signal (hemorrhagic/ proteinaceous content + glandular deposits)

- No
- Yes
 - Size (mm)
 - Inactive.
 - 2b2. Active

Uterosacral ligament nodules or thickening?

Definition: Inactive/ fibrotic disease nodules characterised as \downarrow T1 \downarrow T2 signal.

Active disease as $\uparrow T1$, \uparrow to intermediate- T2 signal (hemorrhagic/ proteinaceous content + glandular deposits).

Yes nodules

2a. Left

2a-1: Size (mm)

2b: Right

2b-1: Size (mm)

2c1: Inactive.

3 Active

res thickening

3a: Left

3b Right

3c Both.

Retrocervical nodule present?

Definition. Inactive/ fibrotic disease characterised as \$\psi\$ T1 \$\$\psi\$ T2 signal.

Active disease as . T1, . T to intermediate-. T2 signal (hemorrhagic/ proteinacous content + glandular deposits).

1 No

Yes

Size (mm) 25

Inactive

ACTIVE

Rectum and colon:

Is there bowel deep infiltrating endometriosis seen?

Definition: Inactive/ fibrotic disease characterised as ↓ T1 ↓ T2 signal.

Active disease as $\uparrow T1$, $\uparrow to intermediate-T2 signal$ (hemorrhagic/proteinacous content + glandular deposits). "Mushroom cap sign" is specific to severe invasive bowel endometriosis and is characterized as a plaque with $\downarrow T2$ at its 'base' and $\uparrow T2$ at its 'cap'.

1: No Yes 2a: Distance from the anal verge 2a-1: Length (mm) 100~

2b: Isolated lesion
2b-2: Multiple lesions
2b-3: Curved lesion

2b-4:

(2c 3 etc)

- 2c: Maximal depth layer of invasion each leasion (muscularis, submucosa,
 - (2c-2: Lesion 2 (free text) delete if not relevant

Straight lesion

2c Is it stuck to any structures or free lying?

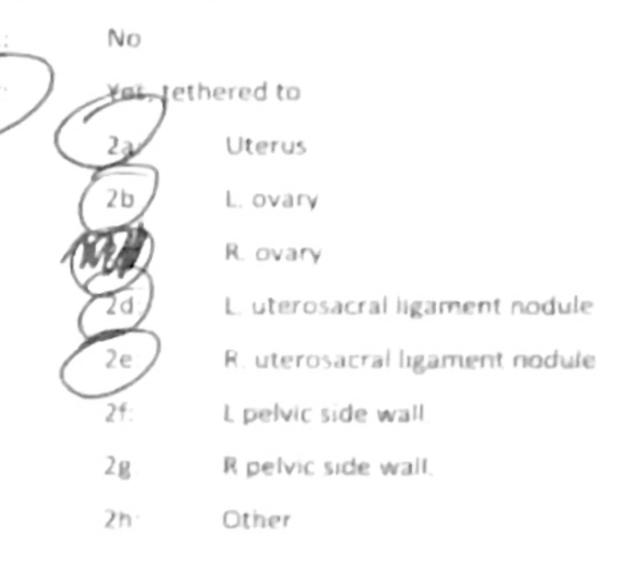

2d-1. Vagina

2d-2. Uterus

2d-3 Uterosacral ligaments

REVIEWER INITIALS
