ENDOMETRIOSIS PELVIC MRI ASSESSMENT –

BR PROFORMA REPORT BLIND REVIEW

Uterus

Absent

Present

Uterine anatomy

- Conventional
- Arcuate
- Septate
 - Full septum
 - Subseptate
- Bicornuate unicollis
- Bicornuate bicollis
- **Didelphys**
- 7. Other (free text enabled).

Uterine Lie (can be more than one selection)

Anteverted

Anteflexed

- Retroverted
- Retroflexed
- Axial
- Others (please specify) (Free text enabled)

Uterine Size (body + cervix - 3 planes in mm)

(Free text).

87×53 ×64

Endometrial thickness (sag plane in mm to nearest mm)

(Free text)

Endometrial lesions

Not identified.

Present. Polyp.

2b-1:

No. of polyps (free text)

2b-2:

Size of each polyp. (free text)

Adenomyosis

No MRI supportive features

- Supportive MRI features as described:
 - 1. Submucosal cysts.
 - Abnormal junctional zone thickening and measurement
 - Anterior (mm)
 - Fundal (mm)
 - Posterior (mm)

Presence of an adenomyoma

1:

2:

Yes

Fibroids

1:

2:

Number of fibroids: 2a:

2b:

Largest fibroids (location and size mm all

fibroids >10mm and/or impact on the cavity) - (Free text)

2b:

Submucosal fibroids

2b-0: No

REVIEWER INITIALS

Yes

2b-1:

2b-1-1: (description: free text)

Left ovary

1: Absent (Branching logic – move to "Right ovary")

2: Present

Left ovary size (3 planes and volume)

2. Volume (above x 0.52).

Left ovary follicle measurements and count

1. N follicles between 2 and 9 mm in diameter

a. (Free text)

2. N follicles > 9 mm

a. (Free text)

3. Dominant follicle

b. N.

Left ovary position

1:

Lateral adnexa. Unremarkable.

2: High positioning in iliac fossa.

3: Tethered/ distorted appearances - (may be multiple options)

3a: Intimate relationship to the lateral uterus

3b Intimate relationship/tethering to adjacent bowel.

3c. Tethering to pelvic sidewall

3d:Tethering to the uterosacral ligament

SUBJECT ID = RR

Left ovarian endometrioma

- 2 ij ä
- Yes
- Size: NN in millimetres (mm) 1<u>a:</u>
- T2 shading (intermediate/low 1b:
- homogeneous T2 signal).
- S 1b-0:
- Yes 1b-1:
- T1 fat sat hyperintense 12
- Absent 1c-0:
- Present 1c-1:
- Internal nodularity, septation or other 1d:
- complexity.
- å 1d-1:
- Yes 1d-2;

1-d-2-1: (Free text)

Left ovarian lesions/cysts other than suspected

endometriomas

Not classifiable

Lesion features

- Unilocular cyst 2a:
- Unilocular-solid cyst 2b:
- Multilocular cyst 20;

Multilocular-solid cyst

2d:

- Solid 2e:
- Vascularity (post gadolinium enhancement). က်
- 3a:

- Absent 3b:
- Fat component (T1/ T2 hyperintense. Low signal on fat suppression).
- Present. 4a:
- Absent.

Right ovary

- Absent (Branching logic move to "Adnexa")

Right ovary size (3 planes and volume)

- 1. NN×NN×NN mm Clx59x247
 - Volume (above x 0.52).
 - 29

Right ovary follicle measurements and count

- 1. N follicles between 2 and 9 mm in diameter
- a. (Free text)
- N follicles > 9 mm

'n

a. (Free text)

Dominant follicle

ന്

Right ovary position

- Lateral adnexa. Unremarkable.
- High positioning in iliac fossa. ;;
- Tethered/distorted appearances may be 'n
- 3a: Intimate relationship to the Jateral-uterus 3b Intimate relationship/ tethering to multiple options.

REVIEWER INITIALS

- adjacent bowel.
- 3c. Tethering to pelvic sidewall
- 3d: Tethering to the uterosacral ligament

Right ovarian endometrioma

- ij
- Size: NN in millimetres (mm)

S

- T2 shading (intermediate/low 2b:
- homogeneous T2 signal).
- , Yes 2b-1: 2b-0:
- T1 fat sat hyperintense 2c:
- Absent 2c-0:
- Present 2c-1:
- nternal nodularity, septation, complex. 2d:
- No Yes 2d-2: 2d-1:

Right ovarian lesions/cysts other than suspected

Not classifiable

endometriomas

- Lesion features
- Unilocular cyst 2a:
- Unilocular-solid cyst 2b:
- Multilocular cyst 2c:

Multilocular-solid cyst

2d:

- Solid 2e:
- Vascularity (post gadolinium enhancement).

ä

3a:

SUBJECT ID = RR

Absent

Fat component (T1/T2 hyperintense, Low signal

on fat suppression).

4a: Present.

₽; Absent.

Adnexa

Hydrosalpinx

<u>tematosalpinx</u>

Ÿ

2b: Yes

ψ Other (free text)

Are both ovaries immediately approximated "kissing"?

<u>::</u>

Ņ Yes

Urinary bladder nodule

Definition: Is there presence of a nodule in the bladder.

Absent

Present

2a: Size: NN in millimetres (mm)

Uterovesical region

preserved fat plane +/- physiologic fluid +/- absent Definition: Assessment of whether there is a visible

distortion between the anterior uterine serosa and bladder.

Normal.

2a: Abnormal

(free text if required)

بن

Ureteric nodule(s)?

Absent

Present

2a: Location (free text + distance to ureteric

orifice/VUJ)

2b: Size (mm)

Pouch of Douglas obliteration

physiologic fluid and immediate approximation of Definition: Assessment for abnormal loss of fat plane +/-

rectosigmoid and/or small bowel to the posterior uterine

Discrete linear bands may be visible (\downarrow T1, \downarrow T2)

serosa, cervix +/- vaginal wall.

! . . Negative

Partial

?

Za. Left

Right

Complete

ψ

Positive = obliteration.

Positive = band adhesions.

Nodules present on the posterior vaginal fornix?

haemorrhagic deposits)

1: No wall +/- nodularity. Nodules: ↓ T2 ↑T1 (if active Definition: Thickening of superior 1/3 of posterior vaginal

بن

REVIEWER INITIALS

2a: Dimension of nodule to be measured in

millimetres (mm).

2b1: Inactive.

2b2: Active

Vaginal forniceal elevation?

vaginal wall, and/or acute angulation of the fornix. Definition: Upper level of fornix on sagittal view is superior to the angle of the uterine isthmus with stretching of

2a: Left

2b: Right

2c: Left and Right.

Rectovaginal nodules present?

below the peritoneum of the Pouch of Douglas. Inactive/ the anterior rectal wall and posterior vaginal fornix, located Active disease as T1, to intermediate-T2 signal fibrotic disease characterised as ↓ T1 ↓ T2 signal. Definition: Presence of deep infiltrating endometriosis in

S

(hemorrhagic/ proteinaceous content + glandular deposits).

ب

Size (mm)

2a:

2b1: Inactive.

262: Active
